The software discussed in this document is furnished under a license and may be used or copied only in accordance with the terms of the license. All warranties given by DS SolidWorks as to the software and documentation are set forth in the license agreement, and nothing stated in, or implied by, this document or its contents shall be considered or deemed a modification or amendment of any terms, including warranties, in the license agreement.

**Patent Notices**

**SOLIDWORKS**® 3D mechanical CAD and/or Simulation software is protected by U.S. Patents 6,219,049; 6,219,055; 6,611,725; 6,844,877; 6,898,560; 6,906,712; 7,079,990; 7,477,262; 7,558,705; 7,571,079; 7,590,497; 7,643,027; 7,672,822; 7,688,318; 7,694,238; 7,853,940; 8,305,376; 8,581,902; 8,817,028; 8,910,078; 9,129,083; 9,153,072; 9,262,863; 9,465,894 and foreign patents, (e.g., EP 1,116,190 B1 and JP 3,517,643).

**eDrawings**® software is protected by U.S. Patent 7,184,044; U.S. Patent 7,502,027; and Canadian Patent 2,318,706.

U.S. and foreign patents pending.

**Trademarks and Product Names for SOLIDWORKS Products and Services**

SOLIDWORKS, 3D ContentCentral, 3D Parametrix.NET, eDrawings, and the eDrawings logo are registered trademarks and FeatureManager is a jointly owned registered trademark of DS SolidWorks.

CircuitWorks, FloXpress, PhotoView 360, and TolAnalyser are trademarks of DS SolidWorks.

FeatureWorks is a registered trademark of Geometric Ltd.

Other brand or product names are trademarks or registered trademarks of their respective holders.

**COMMERCIAL COMPUTER SOFTWARE - PROPRIETARY**

The Software is a “commercial item” as that term is defined at 48 C.F.R. 2.101 (OCT 1995), consisting of “commercial computer software” and “commercial computer software documentation” as such terms are used in 48 C.F.R. 12.212 (SEPT 1995) and is provided to the U.S. Government (a) for acquisition by or on behalf of civilian agencies, consistent with the policy set forth in 48 C.F.R. 12.212; or (b) for acquisition by or on behalf of units of the Department of Defense, consistent with the policies set forth in 48 C.F.R. 12.212.

In the event that you receive a request from any agency of the U.S. Government to provide Software with rights beyond those set forth above, you will notify DS SolidWorks of the scope of the request and DS SolidWorks will have five (5) business days to, in its sole discretion, accept or reject such request. Contact Manufacturer: Dassault Systemes SolidWorks Corporation, 175 Wyman Street, Waltham, Massachusetts 02451 USA.

Contents

Introduction

About This Course .................................................... 2
Prerequisites ............................................................ 2
Course Design Philosophy ........................................... 2
Using this Book ........................................................... 2
Laboratory Exercises .................................................. 2
About the Training Files .............................................. 3
Windows® 7 ............................................................... 3
User Interface Appearance .......................................... 3
Conventions Used in this Book ................................. 3
Use of Color ............................................................. 4
More SOLIDWORKS Training Resources ..................... 4
  Local User Groups .................................................. 4
What is SOLIDWORKS Simulation? ......................... 5
Limitations of SOLIDWORKS Simulation Professional ...... 6

Lesson 1:
Frequency Analysis of Parts

Objectives .............................................................. 7
Modal Analysis Basics ................................................. 8
  Required Material Properties .................................. 10
  Frequencies and Mode Shapes ................................ 10
  Fundamental Frequency ....................................... 10
Case Study: The Tuning Fork ..................................... 11
Lesson 3: Buckling Analysis

Objectives ................................................................. 47
Buckling Analysis ...................................................... 48
  Linear vs. Nonlinear Buckling Analysis ......................... 48
  Buckling Factor of Safety (BFS) ................................ 49
  Buckling Analysis Considerations ............................... 49
Case Study: Particle Separator .................................... 50
Project Description .................................................... 50
  Stages in the Process .............................................. 50
  Conclusion ......................................................... 52
  Calculating Buckling Loads ................................... 52
  Results Discussion ............................................... 53
  Will the structure Buckle or Yield First? ....................... 54
Summary ................................................................. 54
Questions ................................................................. 54
Exercise 5: Buckling Analysis of a Stool ......................... 55
Exercise 6: Cabinet ..................................................... 61

Lesson 4: Load Cases

Objectives ................................................................. 67
Load Cases ............................................................... 68
Case Study: Scaffolding .............................................. 68
  Project Description ............................................... 68
  Stages in the Process ............................................ 69
  Initial Load Case ................................................. 76
Summary ................................................................. 79

Lesson 5: Submodeling

Objectives ................................................................. 81
Submodeling ............................................................. 82
  Parent Study ....................................................... 82
Case Study: Scaffolding .............................................. 83
  Project Description ............................................... 83
  Stages in the Process ............................................ 84
Part 1: Parent Study .................................................. 84
  Parent Load Cases in Submodeling Study ...................... 85
Part 2: Child Study .................................................... 86
  Selecting Components for Submodeling ....................... 87
  Submodel Fixtures ............................................... 88
Summary ................................................................. 91
Questions ................................................................. 91
Lesson 8: Advanced Thermal Stress 2D Simplification

Lesson 9: Fatigue Analysis

Objective ................................................................. 171
Fatigue ................................................................. 172
   Stages of Failure due to Fatigue ......................... 172
   High vs. Low Cycle Fatigue ............................ 173
Stress-life (S-N) Based Fatigue ............................. 173
   Fatigue Loading ............................................. 173
Case Study: Pressure Vessel ................................. 175
   Project Description .................................... 175
   Stages in the Process .................................. 175
Thermal Study .................................................... 177
Thermal Stress Study ........................................... 177
   Static Pressure Study ................................ 179
Fatigue Terminology ........................................... 181
   S-N Curve .................................................... 181
Fatigue Study ....................................................... 184
   Derive from Material Elastic Modulus ................. 187
   Constant Amplitude Events Interaction ............. 187
   Alternating Stress Computation ...................... 187
   Mean Stress Correction ................................. 188
   Fatigue Strength Reduction Factor .................. 190
   Damage Factor Plot ..................................... 190
   Damage Result Discussion ............................ 192
Fatigue Study with Dead Load ............................... 193
   Dead Loads in Fatigue Analysis ...................... 193
   Bolts in Fatigue Analysis .............................. 194
   Find Cycle Peaks ........................................ 195
Summary .............................................................. 197
Questions ............................................................ 197
Exercise 11: Fatigue Analysis of a Basketball Rim ........ 198
Exercise 12: Fatigue of Trailer Hitch ...................... 204
Lesson 10:
Variable Amplitude Fatigue

Objectives ................................................................. 207
Case Study: Suspension .............................................. 208
Project Description ...................................................... 208
  Stages in the Process .............................................. 209
  Discussion ............................................................... 210
Fatigue Study .............................................................. 211
  Variable Amplitude Fatigue Event ............................... 211
  Rainflow Cycle Counting Method ................................. 211
  Variable Loading Curve ........................................... 212
  Bins for Rainflow Counting ....................................... 217
  Noise in Random Loading History ............................... 217
  Fatigue Strength Reduction Factor ............................. 217
  Rainflow Matrix Chart ............................................. 220
  Results ................................................................. 220
  Fatigue Literature .................................................... 221
Summary ................................................................. 222
Questions ................................................................. 222

Lesson 11:
Drop Test Analysis

Objectives ................................................................. 223
Drop Test Analysis ...................................................... 224
Case Study: Camera ..................................................... 224
Project Description ..................................................... 224
  Stages in the Process ............................................... 224
Rigid Floor Drop Test .................................................. 225
  Drop Test Parameters ............................................... 226
  Dynamic Analysis ..................................................... 227
  Damping ............................................................... 228
  Solution Time .......................................................... 229
  Graphing Results .................................................... 230
  Linear vs. Nonlinear Solution ................................. 232
Elastic Floor, Elasto-Plastic Material ................................ 234
Elasto-Plastic Material Model ...................................... 236
  Elasto-Plastic Model Parameters ............................... 237
  Processing Elasto-Plastic Results ............................ 238
  Discussion ................................................................. 239
Drop Test with Contact (optional) ................................ 239
Summary ................................................................. 241
Exercise 13: Drop Test of a Clip ..................................... 242
## Lesson 12: Optimization Analysis

Objectives ................................................................. 245  
Optimization Analysis .............................................. 246  
Case Study: Press Frame ........................................... 246  
Project Description .................................................. 246  
  Design Requirements .............................................. 247  
  Stages in the Process ............................................. 247  
Static and Frequency Analyses .................................... 247  
Optimization Analysis ............................................... 249  
Design Study ............................................................ 249  
  Optimization Goal .................................................. 250  
  Design Variable Summary ....................................... 252  
  Define Constraints .................................................. 252  
  Constraint Tolerance .............................................. 255  
  Constraint Definition Procedure ............................... 255  
  Postprocessing Optimization Results ......................... 256  
Local Trend Graphs .................................................... 260  
Summary ................................................................. 260  
Exercise 14: Optimization Analysis of a Cantilever Bracket . . . 261  
Exercise 15: Optimization of Heat Sink ........................... 264

## Lesson 13: Pressure Vessel Analysis

Objectives ................................................................. 265  
Case Study: Pressure Vessel ......................................... 266  
Project Description .................................................. 266  
  Stages in the Process .............................................. 266  
  Stress Intensity ...................................................... 268  
  Membrane and Bending Stresses (stress linearization) ........ 268  
  Basic Stress Intensity Limits .................................... 268  
Pressure Vessel Analysis ............................................ 268  
  Load Case Combinations .......................................... 270  
  General Primary Membrane Stress Intensity ................. 271  
  Manhole Nozzle Flange and Cover .............................. 272  
  Stress Linearization ............................................... 273  
Summary ................................................................. 276
