SELECTIVE LASER SINTERING PRINTERS

Production thermoplastic parts with ProX™ and sPro™ SLS printers
Limitless possibilities with tool-less manufacturing

ELIMINATE TIME AND EXPENSE OF TOOLING
Direct manufacturing from a 3D CAD file eliminates cost and time involved in tooling and features.

STREAMLINE YOUR WORKFLOW
Eliminates extensive programming and tuning, freeing up your machinists. Drastically reduce assembly times by reducing total part count.

DESIGN FOR FUNCTION
SLS technology frees designers from the restrictions of traditional manufacturing. Complete assemblies can be printed as one part, improving functionality, reducing cost and increasing reliability.

INCREASE MANUFACTURING AGILITY
Additive manufacturing requires no tooling, reducing overhead and increasing economies of scope.

SLS APPLICATIONS INCLUDE:

HOUSINGS
Manufactured in small to medium lot sizes, often bridging the time until final tool is manufactured.

MACHINERY COMPONENTS
Integrate functionality and replace complex assemblies.

FUNCTIONAL TESTING
Test your prototypes for functionality—such as heat run cycle tests.

JIGS AND FIXTURES
Print complex assembly aids and free up CNC time for other projects.

DUCTING
Optimize flow and fit within tight space envelopes with the freedom to print ductwork that is impossible to mold.

CONSUMER GOODS
High-speed production for small lots and custom products.
sPro™ 60, 140 & 230

Accurate, tough production parts

The sPro SLS systems share a common architecture to produce high-resolution, durable thermoplastic parts available in medium to large build volumes.

TOUGH AND DURABLE PARTS
Industrial-grade technology relied on for the toughest applications, year after year.

EXCELLENT PART RESOLUTION, SURFACE FINISH AND EDGE DEFINITION
Print small to large parts with fine detail and sharp edges.

FLEXIBILITY THROUGH UPGRADE OPTIONS
Upgradeable with the flexibility to increase speed and resolution to match your needs now and in the future.

OPEN MATERIAL ARCHITECTURE
Broad choice of materials through flexible print parameters.

TECHNOLOGY LEADERSHIP
3D Systems’ patented Precision Counter Rotating Roller system spreads and compacts each layer of powder materials to create strong dense parts with very smooth surfaces.
ProX™ SLS 500

The economical path to lot production

The newest generation in SLS printers, creating the smoothest surfaces and highest resolution thermoplastic parts.

**UNIFORM PROPERTIES**
Tough and durable parts with uniform 3D mechanical properties: machine on machine, print after print, independent of part orientation.

**UNPRECEDENTED - UP TO 95% MATERIAL EFFICIENCY**
Of every kilogram of material you buy, up to 950 grams are turned into parts. Economical and environmentally friendly.

**STREAMLINE YOUR WORKFLOW**
Automated production tools, powder handling and recycling functions, and mobile production controls allow you to accelerate your time to part.

**UNMATCHED PART QUALITY**
Best resolution, surface finish and edge definition of any 3D sintering technology.

**MAXIMIZE YOUR INVESTMENT**
Lower your cost of ownership with automated production tools, remarkably high throughput, material efficiency and repeatability.

---

**MATERIAL QUALITY CONTROL SYSTEM (MQC)**
Engineered specifically for the ProX SLS 500, the MQC ensures excellent parts and efficient use of material. It automatically collects, recycles and blends material, letting the printer run 24/7 for maximum productivity.
Thermoplastics and elastomers for robust parts

Select from a wide range of DuraForm® materials and match the material performance required for your specific application.

EXCLUSIVE TO THE PROX SLS 500:

**DuraForm ProX PA**  
*Exclusive to the ProX SLS 500*  
Extra strong thermoplastic with superior mechanical properties and finest surface quality.

**DuraForm PA**  
Durable engineering plastic with balanced mechanical properties and fine-feature surface resolution.

**DuraForm EX Black/Natural**  
Impact-resistant thermoplastic with the toughness of injection-molded polypropylene (PP) and ABS.

**DuraForm GF**  
A glass-filled engineering plastic with high stiffness, elevated temperature resistance, and isotropic properties.

**DuraForm Flex TPU**  
An elastomeric, thermoplastic polyurethane with high elongation and enhanced durability.

**DuraForm HST Composite**  
A fiber-reinforced thermoplastic with excellent stiffness, strength and temperature resistance.

* Availability varies by printer model (see details on the last page).

SLS TECHNOLOGY FROM 3D SYSTEMS

SLS production 3D printers are the proven industry standard. You benefit from 3D Systems’ experience with our truly global product support team, offering dedicated service and application engineers, to meet your rigorous quality requirements at facilities around the world.
